

<https://github.com/ujjwaltiwari07/phase5project5.git>

AIM :

You have to deploy ELK Stack on a Docker container to implement continuous monitoring.

DESCRIPTION :

Your manager has asked to create an elegant user interface for data analysis and data visualization as you have worked on ELK stack previously and have the idea of how it works. This will help the DevOps team to monitor and analyze the application behavior.

Pushing the code to your GitHub repositories :

- Open command prompt and navigate to the folder.

cd <GITHUB>

- Initialize repository using the following command:

git init

- Add all the files to git repository using the following command:

git add .

- Commit the changes using the following command:

git commit -m “ Deploying ELK Stack on Docker Container ”

- Push the files to the folder initially created using the following command:

git push origin -u ‘main’
